## **SAFETY CHECK-OUT**

( US model only )

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, through functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cords for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the condition of the monopole antenna (if any). Make sure the end is not broken off, and has the plastic cap on it. Point out the danger of impalement on a broken antenna to the customer, and recommend the antenna's replacement.
8. Check the B+ and HV to see they are at the values specified. Make sure your instruments are accurate; be suspicious of your HV meter if sets always have low HV.
9. Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

### **LEAKAGE TEST**

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

### **HOW TO FIND A GOOD EARTH GROUND**

A cold-water pipe is guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground. If the retaining screw is to be used as your earth-ground, verify that it is at ground by measuring the resistance between it and a cold-water pipe with an ohmmeter. The reading should be zero ohms. If a cold-water pipe is not accessible, connect a 60-100 watts trouble light (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side of the line, the lamp should light at normal brilliance if the screw is at ground potential. (See Fig. B)

## SELF DIAGNOSIS FUNCTION

### 1. Summary of Self-Diagnosis Function

- This device includes a self-diagnosis function.
- In case of abnormalities, the TIMER/STANDBY indicator automatically blinks. It is possible to predict the abnormality location by the number of blinks. The Instruction Manual describes blinking of the TIMER/STANDBY indicator.
- If the symptom is not reproduced sometimes in case of a malfunction, there is recording of whether a malfunction was generated or not. Operate the remote command to confirm the matter on the screen and to predict the location of the abnormality.

### 2. Diagnosis Items and Prediction of Malfunction Location

- When a malfunction occurs the TIMER/STANDBY indicator only blinks for one of the following diagnosis items. In case of two or more malfunctions, the item which first occurred blinks. If the malfunctions occurred simultaneously, the item with the lower blink count blinks first.
- The screen display displays the results regarding all the diagnosis items listed below. The display “0” means that no malfunctions occurred.

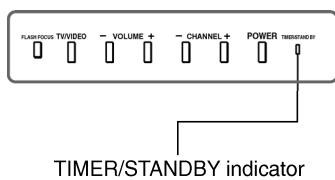

Diagnosis item	TIMER/STANDBY Indicator Number of blinks	Supposed malfunction	Condition	Self-diagnosis screen display, Diagnosis item: Results
• Power not ON	0	[Standby Power Supply System] F601 open. R607 open. Q601 short circuit [Main Power Supply System] IC601 and R612 are broken. VDR601 short-circuit	Cannot turn on the power. LED doesn't blink.	
+B OCP detection	2 times	Short circuit of power supply system in each circuit.	Goes to the standby mode Short circuit of +B line	2 : +B OCP 000
+B OVP detection	3 times	T603 pin 78 open. R672 open.	Goes to the standby mode Malfunction of power supply circuit	3 : +B OVP 000
Vertical deflection stop	4 times	IC1509(V out) is broken. Q1505(V Pulse Buffer) is broken.	Raster goes to one line horizontally, and then video signal is muted.	4 : V Stop 000
Video out abnormality detection	5 times	Video out, Q705, 732, 761 and others in C board circuit. Q218, 219, 220 (A board)	TIMER/STANDBY LED blinks approx. 30 seconds, and then blinks for the self diagnosis.	5 : AKB 000
Horizontal deflection stop	6 times	C515, 516 open. IC206(YC Jungle) is broken.	Raster doesn't appear.	6 : H Stop 000
Audio abnormality detection	8 times	IC406(Audio amp.) is broken. PS401, 402 open.	The sound is not out. Goes to the standby mode	8 : Audio 000

\* : 000 the range of values for number of operations is 000-255. For 256 or higher there is no count up and the number remains at 255.

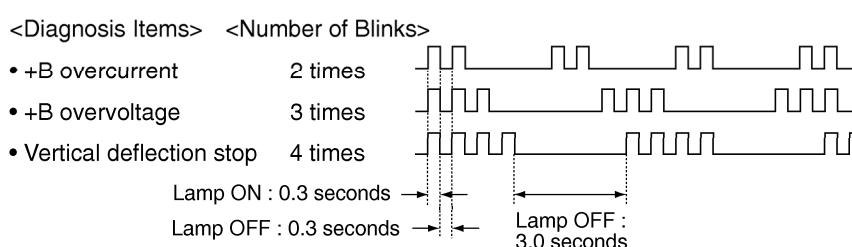

### 3. Blinking count display of TIMER/STANDBY indicator

\* One blink is not used for self-diagnosis.

< FRONT PANEL >

•EXAMPLE

#### Release of TIMER/STANDBY indicator blinking.

- The TIMER/STANDBY indicator blinking display is released by turning OFF the power switch on the TV main unit or removing the plug from the power.

#### 4. Self-diagnosis screen displays

- In cases of malfunctions where it is not possible to determine the symptom such as when the power goes off occasionally or when the screen disappears occasionally, there is a screen display on whether the malfunction occurred or not in the past (and whether the detection circuit operated or not) in order to allow confirmation.

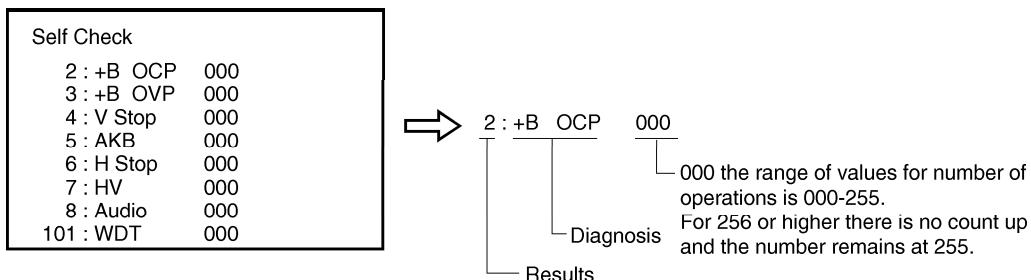

##### <Screen Display Method>

- Quickly press the remote command button in the following order from the standby state.

DISPLAY → Channel **5** → VOL **—** → POWER  
 ↑

Be aware that this differs from the method of  
 entering the service mode (volume **+**).

##### Self-diagnosis screen display

#### 5. Self-Diagnosis Screen Display

- The results display is not automatically cleared. In case of repairs and after repairs, check the self-diagnosis screen and be sure to return the results display to “0”.
- If the results display is not returned to “0” it will not be possible to judge a new malfunction after completing repairs.

##### <Method of Clearing Results Display>

- Power off (Set to the standby mode)
- DISPLAY → Channel **5** → VOL **+** → POWER (Service Mode)
- Channel **8** → ENTER (Test reset = Factory preset condition)

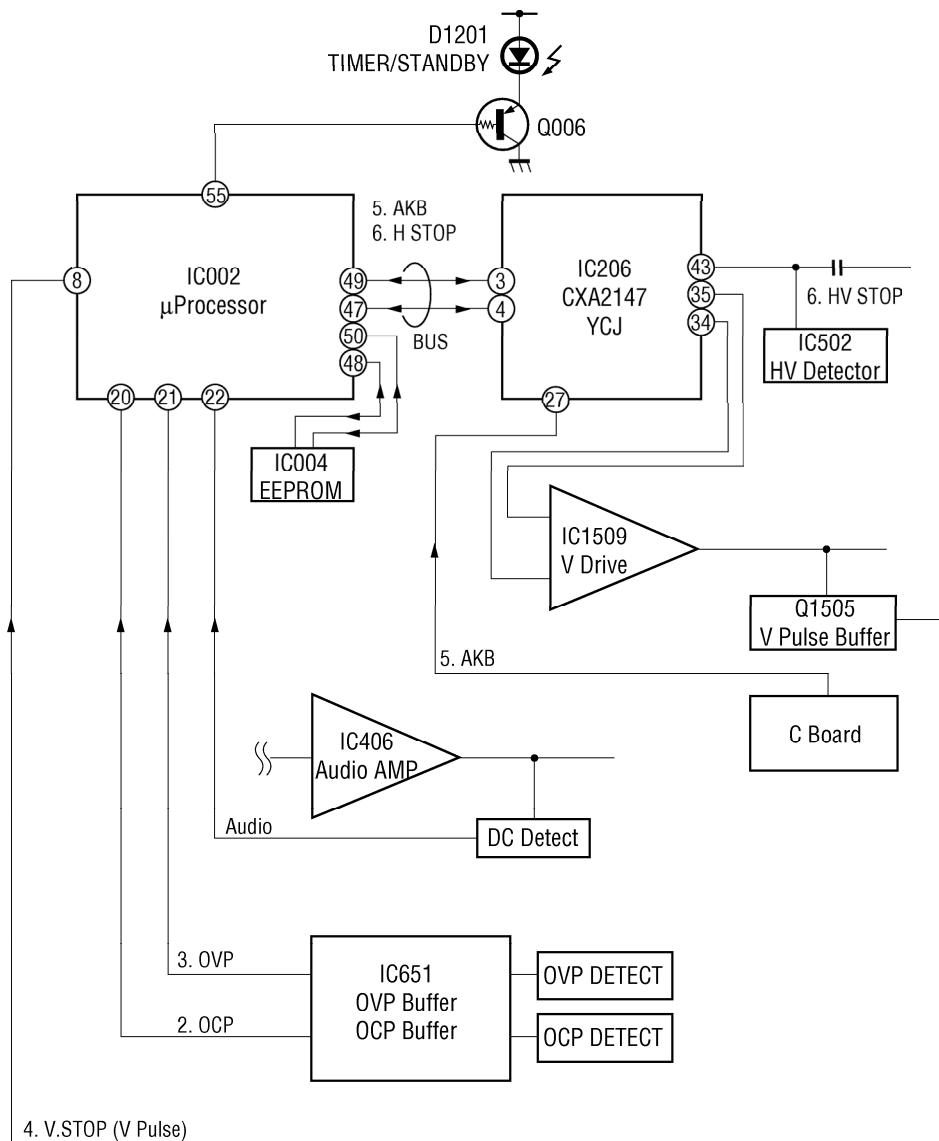

##### <Method of Ending Self Diagnosis Screen>

- When ending the self-diagnosis screen completely, turn the power switch OFF on the remote commander or the main unit.

## 6. Self-diagnosis function operation

OCP	Low B and +B line detect DET SHORT, and shut-down POWER ON RELAY. Reset by turning power on/off. In case of +B is loaded approx. 1.3A or more, microcomputer detects it via IC651.
OVP	In case of +B becomes approx. 150V or more, POWER ON RELAY shuts down and microcomputer detects it via IC651. Reset by turning power on/off just the same as OCP.
V Stop	In case of microcomputer detects 2 seconds or more interval of V Pulse, Reference Pulse turns off by turning off the picture signal in YC Jungle IC (IC206). After the picture signal turns off, V Pulse is regenerated 2 seconds or more, the picture signal turns on.
AKB	IK detection. Makes LED blinking in case of microcomputer doesn't detect IK returns of IC206 CXA2147Q 30 seconds or more.
H Stop	In case of HV becomes 33kV or more, IC502 detects it and shut-down H Drive Pulse. Microcomputer receives H Stop data from IC206 and makes LED blinking.
Audio	In case of DC component overlaps the output of Audio Amp., microcomputer detects it and makes LED blinking. Microcomputer forces to shut down the power.

### ■■■ Precautions

#### Safety

- Operate the projection TV only on 120 V AC.
- The plug is designed, for safety purposes, to fit into the wall outlet only one way. If you are unable to insert the plug fully into the outlet, contact your dealer.
- If any liquid or solid object should fall inside the cabinet, unplug the projection TV immediately and have it checked by qualified service personnel before operating it further.
- If you will not be using the projection TV for several days, disconnect the power by pulling the plug itself. Never pull on the cord.

#### Note on cleaning

Clean the cabinet of the projection TV with a dry soft cloth. To remove dust from the screen, wipe it gently with a soft cloth. Stubborn stains may be removed with a cloth slightly dampened with solution of mild soap and warm water. Never use strong solvents such as thinner or benzine for cleaning.

If the picture becomes dark after using the projection TV for a long period of time, it may be necessary to clean the inside of the projection TV. Consult qualified service personnel.

#### Installing

- To prevent internal heat buildup, do not block the ventilation openings.
- Do not install the projection TV in a hot or humid place, or in a place subject to excessive dust or mechanical vibration.
- Avoid operating the projection TV at temperatures below 5° C (41° F).
- If the projection TV is transported directly from a cold to a warm location, or if the room temperature changes suddenly, the picture may be blurred or show poor color. In this case, please wait a few hours to let the moisture evaporate before turning on the projection TV.
- To obtain the best picture, do not expose the screen to direct illumination or direct sunlight. It is recommended to use spot lighting directed down from the ceiling or to cover the windows that face the screen with opaque drapery. It is desirable to install the projection TV in a room where the floor and walls are not of a reflective material.

## ■■■ *Installing and Connecting the Projection TV*

### **Carrying Your Projection TV**

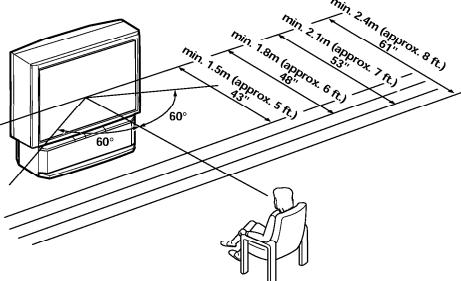

Carrying the projection TV requires three or more people.

### **For KP-48S75/53S75/53N77/61S75**

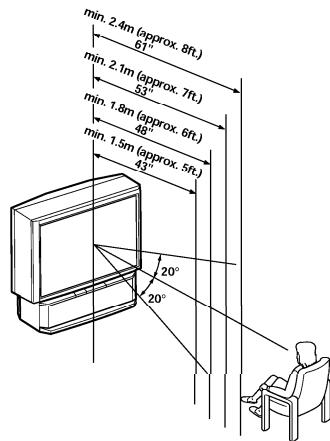

The projection TV has been equipped with casters for easy movement on a hard surface. Please move your projection TV using the casters.

## ■■■ *Installing and Connecting the Projection TV (continued)*

### **Connector Types**

You may find it necessary to use some of the following connector types during set up.

#### **Coaxial cable**

Standard TV cable and antenna cable

#### **Plug Type**

 Push into connection.

#### **Screw-on Type**

 Screw into connection.

#### **S Video cable**

High quality video cable for enhanced picture quality

 Align guides and push into connection.

#### **Audio/Video cable**

 Push into connection.

#### **Video - Yellow**

Audio (Left) - White

Audio (Right) - Red

Some DVD Players and DTV Receivers are equipped with the following three video connectors.

Y - Green

PB (Cb, Cb or B-Y) - Blue

PR (Cr, Cr or R-Y) - Red

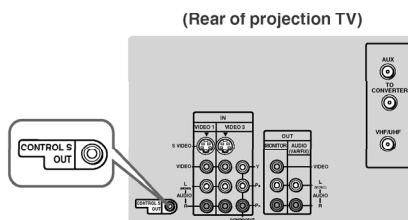

#### **CONTROL S cable**

Sony cable for CONTROL S connection. This feature is exclusive to Sony products and allow greater control of all Sony equipment.

 Push into connection.

#### **About the CONTROL S OUT jack**

To control other Sony equipment with the projection TV's remote control, connect the CONTROL S IN jack of the equipment to the CONTROL S OUT jack on the projection TV with the CONTROL S cable.

### **Making Connections**

#### **Connecting directly to a cable or an antenna**

The connection you choose will depend on the cable found in your home. Newer homes will be equipped with standard coaxial cable (see **A**); older homes will probably have 300-ohm twin lead cable (see **B**); still other homes may contain both (see **C**). Use 75-ohm coaxial cable for improved picture quality (see **A**).

#### **A**

- VHF only or
- VHF/UHF or
- Cable

 (Rear of projection TV) VHF/UHF

#### **B**

- VHF only or
- UHF only or
- VHF/UHF

 (Rear of projection TV) VHF/UHF

 Antenna connector

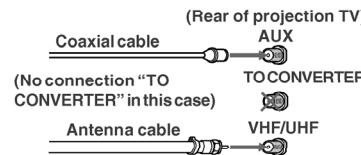

#### Cable or antenna

This is the simplest connection. Connection is made directly from the cable or antenna to the projection TV.

#### Cable and antenna

You may find it convenient to use the following set up if your cable provider does not feature local channels that you are able to receive using an antenna.

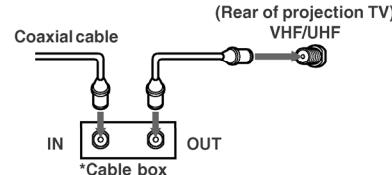

Select Cable or ANT mode by pressing ANT on the remote control.

#### Connecting a cable box

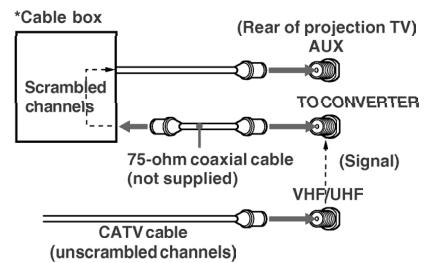

Some pay cable TV systems use scrambled or encoded signals that require a cable box\* only for certain channels (e.g. HBO, SHOWTIME, etc.)

Also, set "Cable" to "On" in the Channel Set Up menu (page 31).

#### Cable box and cable

Some pay cable TV systems use scrambled or encoded signals requiring a cable box\* only for certain channels (e.g. HBO, SHOWTIME, etc.)

For this set up, you can switch between scrambled channels (through your cable box), and normal (CATV) channels by pressing ANT on your remote control.

#### Notes:

- You may be able to program your Sony remote control to operate your cable box. (see "Operating a Cable Box or Satellite Receiver (SAT)" on page 49)
- During PIP or Favorite Channel viewing, the AUX input can only be viewed in the main picture.

### 3-10. REGISTRATION ADJUSTMENT (PJE)

#### • FUNCTION OF BUTTONS OF REMOTE COMMANDER FOR PJE MODE.

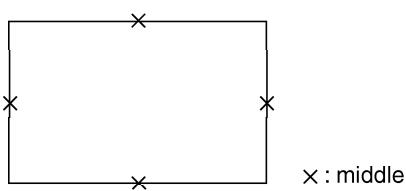

**INIT\***: Press 7, "INIT" green letters appear on the screen. Then press ENTER, all the PJE data are reset.

**READ\***: Press 8, "READ" green letters appear on the screen. Then press ENTER, all the PJE default data are restored.

Note: Internal patterns are used for geometry and convergence adjustments. However, sizing and centering must be done with the use of an external generator. The recommended pattern would be a monoscope, or equivalent pattern, which would provide the means to adjust both the linearity and sizing of the picture.

#### [SETUP FOR ADJUSTMENT]

- Current flow in circuit should be stable before attempting adjustment. So wait 5 minutes after turning on the TV power.
- At the 4 insides of the screen, locate the middle. Use a tape measure to identify the middle.

- Set to the service mode by pressing quickly keys on the remote commander in the standby mode in the following order:

[DISPLAY] → [5] → [VOL+] → [TV POWER]

- Change TV mode to the video input mode.
- Change the VPNT mode to the PJE 00 FDIS.

PJE	00	00
FDIS	I	

- Set FDIS data to "01" to display the registration data of each spot in the fine adjustment.

PJE	00	01
FDIS	I	

- Press [6] to display the test signal (crosshatch) on the screen.
- Select GRN CENT(\*) with the [1] and [4] keys on the remote commander and check that the adjustment data is now "000" both vertically and horizontally.

(H)	(V)
GRN	000 000

In case of replacing two or three CRTs at the same time, replace and adjust one by one.

### 3-11. AUTO REGISTRATION ERROR CODE LIST

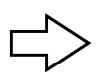

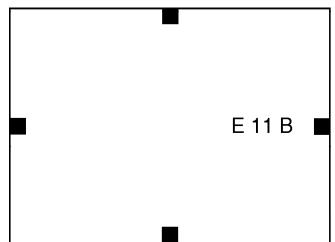

If an error code is displayed after the set has been fully adjusted, correctly, please check the following items: position, tilt and sizing. If either of these adjustments are off, even slightly, the auto-registration pattern will not hit the four sensors properly. This occurs when the internal generator patterns is being flashed on the screen for the sensors to read. Therefore, auto registration (called auto-focus) cannot operate properly causing an error code to be displayed. In order for this function to operate properly, correct position, tilt and size must be adjusted properly.

### ELECTRICAL PARTS LIST

The components identified by shading and mark  are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- The components identified by in  this manual have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.
- Items marked " \* " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

#### RESISTORS

- All resistors are in ohms
- F : nonflammable
